

Fireworks Concentric Puzzle

Assembly: Cut around the edge of each circle. Do not cut out the white center circles. Cut a 6" square from a heavier sheet of paper such as card stock, and mark the center by drawing very light pencil lines from each set of opposite corners. Punch a small hole at the center as well as the center marks on each circle you've cut out. Stack all circles as shown on top of the square and push a brad through all layers and secure it on back of the square. Rotate the circles to scramble the picture. Note: the more round you can make the holes, the smoother the puzzle will rotate.
